

## Project Design Phase Problem – Solution Fit

### Project Solution Fit

Project Solution Fit refers to the stage in a project's development where the proposed solution has been tested and proven to effectively address the target problem. It ensures that the solution is not only functional but also practical, usable, and aligned with user or stakeholder needs.

This stage typically involves building a prototype or minimum viable product (MVP), conducting pilot testing, gathering real-world feedback, and refining the solution based on actual use. Achieving project solution fit means that the solution delivers real value, solves the intended problem, and is ready for wider implementation or scale-up.
